“Help about still ver 22.11.0.41”

February 25, 2018, 4:27 PM

After restart now ver 22.12.0.104 with Win Firewall controls disabled. NCA still something with Interactive LU on servers is not Critical lets see if the hot patch comes by A-LU

February 25, 2018, 4:31 PM

The un-Hot fixed build 104 informs Window that it is managing firewall, lying

February 25, 2018, 4:39 PM
Something came by A-LU

February 25, 2018, 4:51 PM

It was the hot fix

It does NOT enable the Windows Firewall controls

It just fixes the Norton engine to LEAVE it ALONE on

Next Cold Start which is why the A-LU isn't marked as Re-start Required

February 25, 2018, 5:06 PM

Restart Windows 7 Pro working

ISP CenturyLink provided Norton AntiVirus Online working

I had been at Version 22.11.0.41 the last one before “22.12.0.104” which has problems/
I set Network Cost Awareness to “Economy” and Automatic LiveUpdate timing controls
“IDLE & DELAY settings to one minute, one minute and one minute. Thus, I only got
CRITICAL PROGRAM updates. The Broken .104 was critical for me because there was a
HOT FIX for my system setup which was critical.

Therefore after getting on the Merry-go-round, jump off and just get protection updates by
Automatic LiveUpdate. Interactive LiveUpdate will warn you and ask for permission.
DON'T GIVE IT PERMISSION.

J
